

## Abstract

The invention relates to an electronic device (1) provided with means for manual entering of a key code. Said means comprise at least one  
5 selector (2) which is arranged to select said key code or an element of it. The invention also relates to a method for entering a key code in an electronic device (1) provided with means for manual entering of a key code. Said key code is selected by using at least one rotatable selector (2). The invention also relates to a wireless device and an auxiliary  
10 device (1) provided with means for manual entering of a key code. Said means comprise at least one selector (2) arranged for selecting said key code or an element of it.
